

# BENEFITS OF DUCT SEALING

## **LOWER HVAC REQUIREMENTS:**

60% of a building's HVAC energy goes to its fans. Studies show reducing leaks 15% drops fan requirements by 40% or more – saving thousands of dollars every month.

---

## **SHRINK ENERGY WASTE:**

Duct sealing reduces energy waste by eliminating the cracks and holes in ductwork that draw unconditioned, contaminated air into the building.

---

## **REDUCE SYSTEM COSTS:**

Energy costs are reduced by increasing the efficiency of the HVAC fans and by eliminating excess ventilation loads.
